57th Tifton Performance Tested Bull Sale

Welcome to the 57th annual bull test sale at Tifton. We hope you will be pleased with the amazing group of outstanding herd sire prospects awaiting your evaluation! Whether you are looking for bulls that excel in growth, calving ease, milk, or bulls with complete carcass EPD's, we have them for you.

These powerful bulls continued to maintain a high rate of gain throughout the 112-day test with an overall average daily gain of 4.15 pounds per day. The quality is deep in every breed. Only the bulls that rank in the top two thirds of each breed based on average daily gain (ADG) and weight per day of age (WDA) are allowed to sell. All bulls have passed a breeding efficiency exam and are guaranteed breeders. Any bulls that present concerns with disposition, soundness, etc., are not eligible to sell.

Performance records, EPDs, and ultrasound measurements for backfat, ribeye area, and percent intramuscular fat are included for your study. We strive to provide the most current information possible in order for you to make the best decision when selecting your next herd sire. Our goal is to identify and provide the best genetics available and improve the beef industry in Georgia and the Southeast.

The bulls were tested for PI/BVD (persistently infected BVD). All were negative. In addition, all bulls are free from known genetic defects.

We have an excellent short course planned for Tuesday, March 3. This is an opportunity to learn from some timely presentations, to see old friends, and to view the bulls. A copy of the program is included in this catalog. Also, remember the heifers in this year's HERD program. They are performing very well, and we should have approximately 110 safe-in-calf heifers offered for sale on April 21.

On behalf of the consignors, the Georgia Cattlemen's Association, and The University of Georgia, we welcome you to our short course and sale. If you should need any assistance or additional information, please contact me at 229/386-3214 (office) or 678/234-3547 (cell) OR Patsie at 229/386-3683 (office) or 229/881-2705 (cell). Thanks for your continued interest in our programs.

Kind regards,

Jacob Segers
Extension Animal Scientist - Beef Cattle

BEEF CATTLE SHORT COURSE SPONSORS

These organizations provided support for the short course through financial contributions. Please express your appreciation to the representatives of these organizations. Also, a special thanks is due the ABAC Cattlemen's Association for its preparation of the sale-day lunch and involvement in other service projects.

GENERAL INFORMATION

ANNOUNCEMENTS

Announcements from the Auction Box will take precedence over the printed matter in this catalog and all other announcements.

SALE ORDER

Sale will begin at 12:30 p.m. The order of sale is determined by index. The highest indexing bull sells first and is followed in descending order, regardless of breed.

Index = Average Daily Gain (ADG) on test + Weight per Day of Age (WDA) at end of test.

ELIGIBILITY FOR SALE

- A. Bulls should be in approximately the top two-thirds on a combination of rate of gain (ADG) and weight per day (WDA) of age in each breed group.
- B. Unruly or unsound bulls will not be sold. Particular attention will be paid to indications of breeding soundness.
- C. Scrotal circumference must be at least 30 cm. for all breeds at one year of age.

ALL PERSONS WHO ATTEND THIS SALE DO SO AT THEIR OWN RISK. THE OWNERS AND SPONSORS ASSUME NO LIABILITY, LEGAL OR OTHERWISE, FOR ANY ACCIDENTS OF ANY NATURE.

TERMS AND CONDITIONS

- 1. Each bull will be sold to the highest bidder.
- 2. The auctioneer will settle any dispute as to bids.
- 3. The terms of the sale are cash or check.
- 4. Each bull becomes the risk of the new owner as soon as sold in the auction ring. However, every precaution will be taken for the safety of all cattle until they are loaded.
- 5. All bulls will be fed and looked after for a period of 48 hours after the sale.
- 6. A certificate of registry, properly transferred, will be furnished to the buyer at the seller's expense. Buyers that have not received registration certificates within 90 days of the sale should contact the sale management at 229/386-3683.
- 7. Health certificates will be available on each bull sold. Buyers from states with special entry requirements should call 229/386-3683.
- 8. Bulls are guaranteed by the consignors to be breeders (defined as the ability to settle healthy cows by the time the bull is 18 months of age) with the exception of:
 - A) Injury or disease occurring to the animal after the sale.
 - B) Gross negligence or willful misconduct on the part of the purchaser.

EXPLANATION OF GAIN TEST DATA

The Tifton Bull Evaluation Center is in its 57th year. The program is a service to Georgia cattlemen. It is managed by the Animal & Dairy Science Department of The University of Georgia College of Agricultural & Environmental Sciences with the cooperation of the Georgia Cattlemen's Association.

A. HOW THE BULLS HAVE BEEN HANDLED

144 bulls born between December 1, 2013, and February 28, 2014, were delivered to the station on September 29 and 30, 2014. They had to weigh a minimum of 2.5 lbs. per day of age at delivery. The bulls were fed for a 21-day warm-up and then weighed on test for a 112-day feeding period. Twenty-eight day intermediate weights and reports have been made during the test.

B. PERFORMANCE RECORDS

Each bull selling has passed rigid performance standards and has a complete record which is presented in the summary below the 2 generation pedigree. Follow this example numerically:

Trait	Birth	Weaning		Final	Yrlg	ADG	WDA	SC	REA	IMF	Fat	AYHH	Frame
Weight	(1)	(2)	Cont (3)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)
Ratio			Mgt (4)										

Buyer

Price

- (1) **Birth Wt.** -- Actual birth weight
- (2) **Adjusted 205 Day Weaning Weight & Ratio** -- Standard weaning weight adjusted for age of dam.
- (3) **Number of Contemporaries** -- The number of bulls in the same weaning group.
- (4) **Weaning Management** -- Non-creep or creep-fed.
- (5) **Off Test Weight** -- Actual final weight at end of test.
- (6) **Adjusted 365-day weight & ratio** -- Calculated using Beef Improvement Federation Formula
- (7) **112 Day Test** -- Average daily gain and ratio.
- (8) **Weight Per Day of Age and Ratio** -- Off test final weight divided by days of age at end of test.
- (9) **SC -- Scrotal Circumference** -- The circumference of the scrotum in cm. at the widest area at 12 months.
- (10) **REA** -- Ribeye area in square inches adjusted to 12 months of age.
- (11) **IMF** -- Percent intramuscular fat of the ribeye adjusted to 12 months of age.
- (12) **Fat** -- Fat thickness between the 12th and 13th rib measured on January 15, 2015, and adjusted to 12 months of age.
- (13) **AYHH -- Adj. Yearling Hip Height** -- Hip height in inches adjusted to 365 days of age.
- (14) **Frame Score.**

C. HEALTH & FERTILITY

Perfect health status. Bulls have been examined thoroughly for physical and reproductive soundness.

EXPECTED PROGENY DIFFERENCES (EPDs)

Expected progeny differences in this catalog are calculated by breed associations based on the performance of the individual bull and the performance of other related animals. Since EPDs include performance of related animals and EPDs adjust for differences in management groups, EPDs are more accurate in predicting how a bull's progeny will perform than the bull's individual performance alone. Every attempt was made to obtain current EPDs from each breed association just prior to printing the catalog. Please keep in mind that EPDs can change each time breed associations update their data.

EPD values should be used to compare any bulls within the same breed. Since each breed calculates its own EPDs and uses different bases and methods, EPDs listed in this catalog should not be used to compare bulls of different breeds. Differences in breed average EPDs do not represent differences in performance between breeds.

Birth, Weaning, Yearling and Milk EPDs are expressed in pounds of calf. Differences in EPDs between two bulls within the same breed indicate the expected difference between their calves. A bull with a weaning weight EPD of +40 would be expected to produce calves that averaged 10 pounds heavier at weaning compared to calves produced by a bull of the same breed with a +30 weaning weight EPD. The same is true for birth and yearling EPDs. Milk EPDs are an indication of the added weight at weaning of a bull's daughter's calves due to the bull's transmission of milking ability.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers. Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Carcass EPDs are not available for all breeds. These are yearling bulls and carcass data on relatives for calculation of EPDs is limited in many cases. For these reasons, carcass EPDs are often missing and accuracy values may be very low. Carcass EPDs include Rib Eye Area (REA), Fat Thickness (FAT), Carcass Weight (CW), and Marbling Score (MARB). Carcass EPDs are calculated within breed and cannot be used to compare across breeds.

Current Average EPD's of Non-Parent Males

Breed	Birth	Weaning	Yearling	Milk
Angus	1.8	49.0	86.0	23.0
Brangus	1.1	24.6	46.1	9.5
Charolais	0.6	24.2	43.6	7.8
Chianina	1.7	47.4	68.9	17.7
Hereford	3.3	48.0	78.0	20.0
Red Angus	-1.3	57.0	89.0	20.0
Santa Gertrudis	0.2	4.0	6.0	0.0
Simmental	1.9	63.2	92.0	22.1
Simmental Hybrid	0.6	60.7	92.9	22.8

Angus \$ Value Indexes:

\$EN – Cow Energy Value is expressed in dollars savings per cow per year. It assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals.

\$W – Weaned Calf Value is an index value expressed in dollars per head. It is the expected average difference in future progeny performance for preweaning merit.

\$F – Feedlot Value is an index value expressed in dollars per head. It is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

\$G – Grid Value is an index value expressed in dollars per head. It is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

\$B – Beef Value is an index value expressed in dollars per head. It is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

Breed Average for Non-Parent Bulls: \$EN = -7.19 \$W = 36.35 \$F = \$35.09 \$G = \$29.87 \$B = \$84.61

Hereford \$ Value Indexes:

Baldy Maternal Index (BMI\$) is designed to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows. Retained ownership of calves through the feedlot phase of production is maintained.

Calving Ease Index (CEZ\$) is used to select bulls that will be used in a heifer program.

Brahman Influence Index (BII\$) utilizes Hereford bulls in a rotational crossbreeding system with Brahman.

Certified Hereford Beef Index (CHB\$) is a terminal sire index where Hereford bulls are used on British-cross cows, and all offspring are sold as fed cattle on a CHB pricing grid.

Breed Average for 2013 & 2014 Calves: BMI\$ = 17.00 CEZ\$ = 15.00 BII\$ = 15.00 CHB\$ = 23.00

Simmental and Hybrid Simmental Indexes:

All-Purpose Index (\$API) evaluates sires being used on the entire cowherd (bred to both Angus first-calf heifers and mature cows) with a portion of their daughters being retained for breeding and the remaining progeny being put on feed and sold grade and yield. All EPDs, with the exception of tenderness, are taken into consideration in this index.

Terminal Index (\$TI) evaluates sires' economic merit in situations where they are bred to mature Angus cows, and all offspring are placed in the feedlot and sold grade and yield.

Breed Average for Purebred Simmental: \$API=120.60 \$TI=67.40 **Breed Average for Hybrid Simmental:** \$API=121.70 \$TI=68.70

ULTRASOUND MEASUREMENTS FOR THE 2014-15 TIFTON BULL EVALUATION PROGRAM

Procedure: Ultrasound measurements for the 2014-15 Tifton Bull Evaluation Program were collected for the body composition traits of fat thickness, ribeye area, and an estimate for intramuscular fat (marbling) between the 12th and 13th ribs of each bull. The scans were collected by Martin's Cattle Services of Jefferson, Georgia (706/654-8883), using Centralized Ultrasound Processing Laboratory (CUP) procedures. They were interpreted by CUP technicians in Ames, Iowa.

Adjustments: Ribeye area, marbling, and external fat measurements were adjusted to 365 days of age using adjustment factors from the representative breed association. Scan date was January 15, 2015.

Marbling: Marbling is a visual estimate by a USDA grader of the amount and distribution of fat within the ribeye muscle. Real-time ultrasound has the capability to objectively measure the percentage of fat in the ribeye muscle. Current research shows a strong relationship between USDA marbling and ultrasound estimates of percent intramuscular fat. Several recent research studies have also shown a low genetic correlation between marbling and fat thickness, indicating that producers can select for increased marbling while not being concerned about additional external fat. With current ultrasound technology, bulls within a breed can be sorted into a high, medium or low group for percent intramuscular fat. Ultrasound data is currently most useful in identifying sires that are superior for a particular carcass trait of interest.

BULL TEST FEED FORMULA	
Ingredient	Amount Per Batch
Loose Soyhulls	1,200 lbs.
Corn Gluten Pellets	600 lbs.
Shelled Corn	200 lbs.
Kar-O-Lass	80 lbs.
Mineral	25 lbs.

Note: The mineral was custom prepared containing approximately 27% Calcium, 17% Salt, and 2072 grams per ton of Monensin, as well as Vitamins A, D, E, and other trace minerals. Grass hay was fed free-choice.
